

Using LPG Propane Cylinders Safely

This e-learning workshop is for individuals who use LPG propane cylinders and associated equipment only. It covers many applications including blowtorches, brazing, shrink wrapping, forklift trucks and bitumen boilers. The training contains information on:

- Propane properties
- Hazards posed by flammable gases
- Cylinders and valves
- Preparing cylinders for use
- Gas control equipment
- Using cylinders safely
- Moving cylinders safely
- Correct storage of cylinders
- Propane applications
- Safe transportation of LPG cylinders

At the end of this online training workshop learners will be able to:

- Correctly identify propane cylinders
- Understand how cylinders operate
- Identify flammability hazards
- Select the correct gas control equipment
- Identify the key stages in using cylinders safely
- Recognise the hazards associated with handling cylinders
- Re-assess current storage facilities in line with safe working practices
- Become proactive in assessing risk when using propane cylinders
- Introduce safe working practices into their working environment

The fee for this workshop is £35.00 + vat per learner including online certification and comprehensive, readily accessible support documentation. We offer discounts for purchases of more than 10 training access codes, please contact us for further information.

You can purchase this e-learning workshop using a credit or debit card on our website. If you do not wish to purchase by card and instead wish to be invoiced, please contact us either by e-mail at admin@gassafetytraining.com or by phone during UK office hours on + 44 (0)1270 758890.
