

Transporting Gas Cylinders by Road

This online training workshop is for individuals who transport gas cylinders by road in or on vehicles. It is aimed at people transporting small quantities of low-risk gas cylinders using small vehicles such as vans and pick-ups. The training contains information on:

- Relevant legislation
- Legal requirements
- Appropriate vehicles
- Safety requirements
- Personal protective equipment
- Gas types and hazards
- Cylinder labelling and recognition
- Correct loading of cylinders
- The role of Dangerous Goods Safety Advisers
- Warning signs
- Emergency procedures

At the end of this online training workshop learners will be able to:

- Appreciate the relevant legislation
- Recognise the need to select the correct type of vehicle
- Understand the basic safety requirements
- Be aware of the common types of gases transported
- Recognise different types of gas cylinder
- Take the appropriate action before they start a journey transporting gas cylinders
- Determine what personal protective equipment they require
- Recognise the need to handle and secure cylinders correctly
- Assess the ventilation within the vehicle
- Describe the actions to be taken in the event of a road traffic accident
- Introduce safer working practices into their workplace

The fee for this workshop is £20.00 + vat per learner including online certification and comprehensive, readily accessible support documentation. We offer discounts for purchases of more than 10 workshops, please contact us for further information.
